Alka Seltzer Lab Answers - seapa.org

Alka Seltzer is an effervescent tablet that contains aspirin (acetylsalicylic acid), citric acid, and sodium bicarbonate (NaHCO_3). As soon as the tablet dissolves in water, the NaHCO_3 dissociates to form a bicarbonate ion (HCO_3^-) and a sodium ion (Na^+)

In this lab, you will collect the gas given off from a sample of Alka Seltzer. Using the ideal gas law, you will determine the mass of gas produced and from that the percent mass lost when Alka Seltzer reacts. After this, you will use your actual percent of carbon dioxide to determine your percent error and percent yield.

Alka-Seltzer is a combination of sodium bicarbonate, potassium bicarbonate, and anhydrous citric acid. In addition, when the tablet comes in contact with glucose, it creates some sort of a “frizzy” reaction; this may be the production of bubbles.
