Once the engine is running and the alternator is generating power, a diode feeds the field current from the alternator main output equalizing the voltage across the warning indicator which goes off. The wire supplying the field current is often referred to as the "exciter" wire. The drawback of this arrangement is that if the warning lamp

Tap the alternator carefully with a hammer while the engine is running; if the charging goes back to normal, the coils inside it are worn out. Check the large power cable to the alternator and the fuse, usually a large 40-60 amp fuse located near the battery. Check the ground cable between the engine and the body.
