### Engine Diagram

The BMW M40 is an SOHC four-cylinder petrol engine which was produced from 1987–1994. It served as BMW's base model four-cylinder engine and was produced alongside the higher performance BMW M42 DOHC four-cylinder engine from 1989 onwards.. Compared with its M10 predecessor, the M40 uses a belt-driven camshaft, and

The M40-series started in 1987 with the production of 1.8-liter four-cylinder engine M40B18. M40 engines came to replace the old M10-series, which was very successful and common for BMW models in those days. A year later, the manufacturer released the smaller version - 1.6-liter M40B16 engine. The engine is quite traditional and straightforward.

M40B16 Engine Problems and Reliability. All M40 series engines are quite good. Lifespan is about 180-200 thousand mileage. But of course, the M40B16 has some problems like unreliable timing belt, etc. The main issue of this engine is its age. Most of them need to rebuild or to replace some old parts, and all BMW parts are expensive.

June, 2014: This BMW M20 engine was offered to me and the deal was too good to pass up. Supposedly it was taken from a parts car with 88k miles. It's from a 1988 325is. I know it's an 88 because it has the later style coolant system with the metal coolant pipe across the front. And it's an "is" because
