data is typically stored in a data warehouse or in smaller data marts that hold subsets of a company's information. In addition, Hadoop systems are used within BI architectures as repositories or landing pads for BI and analytics data; especially for unstructured data, log files, sensor data and other types of big data.

**Intelligence ...**

Business intelligence tools are essentially data-driven decision support systems (DSS).

BI is sometimes used interchangeably with briefing books, report and query tools, and executive information systems. With these tools, business people can start analyzing the data themselves rather than wait for IT to run complex reports.
