Has anyone figured what those engine mount solenoids do?

Look under the hood of an old Ford hot rod and its engine mounts will likely be simple metal brackets bolted to the car's chassis; in mass-produced passenger cars like your A4, engine mounts serve a dual purpose of connecting the engine to the chassis and keeping the engine's vibrations from being transmitted to the passengers.

It's a hydraulic engine mount with two fluid chambers connected by a large orifice (kept closed by a rotary valve) and a small orifice (always open). The small orifice allows the mount to operate much like a simple, fairly stiff shock absorber. You learn something every day ;)
