Printers nowadays are having to learn new technologies if they are to remain competitive. This innovative, practical manual is specifically designed to cater to these training demands. Written by an expert in the field, the Handbook is unique in covering the entire spectrum of modern print media production. Despite its comprehensive treatment, it remains an easy-to-use, single-volume reference, with all the information clearly structured and readily retrievable. The author covers both traditional as well as computer-aided technologies in all stages of production, as well as electronic media and multimedia. He also deals with training, research, strategies and trends, showing readers how to implement the latest methods. With 1,200 pages, containing 1,500 illustrations - over half in colour - the Handbook conveys the current state of technology together with its specific terminology. The accompanying CD-ROM includes the entire manual in fully searchable form, plus additional software tools. Invaluable information for both beginners and "old hands" in printing works, publishing houses, trade associations, the graphics industry, and their suppliers.

Current material is filed in binder volumes, which are later reprinted as bound volumes.

Based on the Job Definition Format (JDF) new workflow concepts are developed which will help create integrated workflows in the graphic arts industry. These developments create new business opportunities that will lead to a cost reduction but also will entail risks. Starting with a comprehensive explanation of the new standard, information is offered that enables business executives to make sound decisions on software investments in the graphic arts industry. Available architectures and products are highlighted and benefits are described. The steps relevant for the process integration are discussed.
