It also invites society, as a whole, to seek a path in the use of these interfaces enabling humanity to prosper while avoiding the relevant risks. As such, the volume is the first extensive study in cyberneuroethics, a subject matter which is certain to have a significant impact in the 21st century and beyond.

This striking idea has had considerable influence within critical theory, cultural studies and even science fiction (where it has surfaced, for example, in the Terminator films and in the Borg of the Star Trek franchise). But it is a notion that has had much less currency in theology. In his innovative new book, Scott Midson boldly argues that the deeper nuances of Haraway's and the cyborg idea can similarly rejuvenate theology, mythology and anthropology. Challenging the damaging anthropocentrism directed towards nature and the non-human in our society, the author reveals - through an imaginative reading of the myth of Eden - how it is now possible for humanity to be at one with the natural world even as it vigorously pursues novel, 'post-human', technologies.
