Abstract. Effects of gases flowing  
in a magnetic field analogous to  
the Hall effect and planar Hall  
effect in conductors are  
investigated. It is shown that for  
oxygen those effects are not  
functions of  $H/P$  only, that is in  
contradiction with the existing  
theory.

temperature of the system, and  $k$  is Boltzmann's constant. The probability that the absolute value of the velocity lies between  $v$  and  $v + \Delta v$  follows from (1) and has the form. This probability reaches a maximum when . The velocity  $v_0$  is called the most probable molecular velocity.
