Technology is an open source  
API available to test both  
Browser and Mobile  
applications. It is  
completely platform

independent in that tests built for one browser or mobile device, will also work on all other browsers and mobile devices. Selenium supports all major development languages which allow it to be tied directly

into the technology used to develop the applications.

This guide will provide a step-by-step approach to

designing and building a data-driven test framework

using Selenium WebDriver, Java, and TestNG. The book

# Access PDF Master Selenium Webdriver

starts off by introducing users to the Selenium Page Object Design Patterns and D.R.Y Approaches to Software Development. In doing so, it covers designing and building a Selenium WebDriver framework that

# Access PDF Master Selenium Webdriver

supports both Browser and Mobile Devices. It will lead the user through a journey of architecting their own framework with a scalable driver class, Java utility classes, JSON Data Provider, Data-Driven Test Classes,

and support for third party tools and plugins. Users will learn how to design and build a Selenium Grid from scratch to allow the framework to scale and support different browsers, mobile devices, versions,

and platforms, and how they can leverage third party grids in the Cloud like SauceLabs. Other topics covered include designing abstract base and sub-classes, inheritance, dual-driver support, parallel

testing, testing multi-branded applications, best practices for using locators, and data encapsulation. Finally, you will be presented with a sample fully-functional framework to get them up and

WebDriver for browser  
testing. By the end of the  
book, you will be able to  
design your own automation  
testing framework and  
perform data-driven testing  
with Selenium WebDriver.
