In National Space Law in China, Yun Zhao examines space laws, regulations and policies in China. As the first English monograph on national space legislation in China, this book shall contribute to the understanding of China's space law regime.

This book will be the first English on space law written by a Chinese scholar. With the rapid development of space activities in China, many space scientist and lawyers are keen to know Chinese Legal views on policies and laws on space activities. The book discusses new development of space law in view of the rapid development of space commercial activities from a Chinese legal perspective. The topics selected in the book reflect the author's teaching and research in space law at four different universities: Leiden University, Erasmus University Rotterdam, City University of Hong Kong and the University of Hong Kong. Six areas of space law issues have been selected: property rights, space registration and liability regime, launching services, telecommunications services, national space legislation and international space co-operation. All the topics are closely related to current Chinese space legislation and practice. When dealing with the above six issues, the author will first briefly discuss the current rules and practice at the international level, followed by in-depth analysis of Chinese situation. This will be a unique book. Those who are researching on space law and/or in charge of formulating national space policy will be especially interested in the elaboration of Chinese attitude toward space commercialisation and of the current Chinese space policies and laws.

Durch den Start des Satelliten BRITIA Austria (TUGSAT-1) im Jahr 2008 wird Österreich erstmals "Start-Staat" im volkerrechtlichen Sinn sein. Mangels eines österreichischen Weltraum-Gesetzes sind viele Rechtsfragen in diesem Kontext jedoch ungeklärt. Im September 2006 kamen internationale Experten zu einer Konferenz in Graz zusammen, um über Notwendigkeit und Mindestinhalte nationaler Weltraumrechts-Gesetze zu diskutieren. Konferenzbeiträge und Ergebnisse, weiterführende Analysen und der mögliche Inhalt eines österreichischen Weltraumgesetzes, dies auf der Basis eines Vergleichs mit jüngsten nationalen Weltraumgesetzen in Europa, werden zum Teil auf Englisch und zum Teil auf Deutsch veröffentlicht.

This book provides a unique in-depth comparative and evaluative analysis based upon primary sources. Therefore, it does not only provide a more complete understanding of the subject compared to other publications but, because it provides a full perspective, can also serve as a basis for further research. The

# Where To Download National Space Law In China An Overview Of The Current Sition And Outlook For The Future Studies In Space

interest in national space legislation, and the importance thereof to regulating space activities conducted by private entities, gives a clear incentive to conduct a comparative analysis of the national space legislation of various states. The purpose of this report is to provide such a comparative analysis that will detail the similarities and differences between the national space laws of selected states with a focus on European comprehensive national space legislation. The states discussed are: Sweden, the United Kingdom, Australia, China, Belgium, the Netherlands, France, Austria, Indonesia, Denmark, New Zealand and Luxembourg. This report is intended to assist the efforts of states that are seeking to enact or revise national space legislation not only by presenting the approaches taken by other states, but also by presenting, as far as possible, the rationale behind their approaches. The readership of this book consists of academics and professionals in space law and can further assist policymakers wishing to revise or enact national space legislation.

Spaceflight is a rational undertaking, yet full of emotions. It is a dream of mankind and a multi-billion industry likewise. It is subject to a distinct branch of law – and moreover part of modern pop culture. In short: spaceflight is fascinating. “Outer Space in society, politics and law” is an inter-disciplinary approach to the understanding of modern space law. Technical, cultural and historical aspects lay the foundation for a sound comprehension why space law norms have been established and what they mean in practice. The reader will realize the impact space and spaceflight have on society – from Stonehenge to climate change. A new approach to presenting space law: comprehensive and illustrative. “We live in a society absolutely dependent on science and technology and yet have cleverly arranged things so that almost no one understands science and technology. That's a clear prescription for disaster.” Carl Sagan

The Handbook of Space Law addresses the legal and regulatory aspects of activities in outer space and major space applications from a comprehensive and structured perspective. It fundamentally addresses the dichotomy between the state-oriented characte

The aim of this unique volume is twofold. First and foremost, it sets out to offer the reader a comprehensive and challenging view, from some of the most distinguished scholars in the field, of present and future trends and issues in the fields of international air and space law. By breaking new ground in this way, it pays tribute to the scholarly achievements of Henri (Or) Wassenbergh, whose ideas and work have helped to shape both air and space law throughout his long and distinguished career. "Air and Space Law: De Lege Ferenda" will be of interest to all those concerned with the present status of air and space law, and with the challenges the aviation and space industry must face in the century to come.

The United Nations currently has five effective international space treaties, namely the Outer Space Treaty of 1967, Space Rescue Agreement of 1968, Space Liability Convention of 1972, Space Registration Convention of 1975, and Moon Agreement of 1979. However, with recent competition and movements to mine and exploit natural resources from such entities as the moon, asteroids, etc., these outdated treaties no longer address current advancements. It is imperative that new research is undertaken to urge and progress new space laws and policies that strengthen international cooperation and joint undertakings into the exploitation of natural resources from outer space. Global Issues Surrounding Outer Space Law and Policy grants a general understanding for the current issues and methods of solution in the field of outer space law and policy in the global society. It suggests a revision of the five international space treaties and presents a new International Space Agency (ISA) that would use international cooperation and an International Court of Air and Space Law to promote the speed of work and fairness in trials of air and space law cases. Additionally, solutions for the cooperation of the global community towards joint undertakings and exploitation of natural resources in celestial bodies is explored. This book is ideal for lawyers, professors,

government officials, space agencies, academicians, researchers, students, and anyone looking to understand the complicated problems and methods of solution in international space law and policy.

Francis Lyall and Paul B. Larsen have been involved in teaching and researching space law for over 50 years. This new edition of their well-received text gathers together their knowledge and experience in readable form, and covers developments in all space applications, including space tourism, telecommunications, the ITU and finance. With an extensive citation of the literature, the discussion provides an excellent source for both students and practitioners.
