This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

The Wilderness First Aid Handbook is a handy, quick-reference guide easily accessible with basic wilderness first aid knowledge, but it does not require advanced degrees or experience with medicine and prehospital care. Recognizing that certain knowledge and procedures are outside the scope of a layperson ' s training, Dr. Grant Lipman limits the use of technical terms and advanced techniques that may be unfamiliar to some readers or beyond their comfort zone. This system-based, easy-to-follow guide assists the first aid provider when encountering most wilderness emergencies, from cold and heat concerns and blister treatments to high altitude illness and lightning injury prevention—and much more. Typically the most challenging decision in the wilderness environment is when to evacuate a sick or potentially sick person, and as such, each section has detailed decision-making steps to inform you of when to be concerned and when to get out. This guidance is based upon the recent evidence-based consensus statement published by the Wilderness Medical Society on the scope of practice of wilderness first aid. Filled with original, full-color artwork illustrating the techniques and procedures described and with internal-spiral binding and waterproof pages handy for travel into extreme environments, The Wilderness First Aid Handbook is a must-have for every back pocket or backpack.

The first teaching manual ever for the "Wilderness First Responder" course, this title represents the cutting edge in medical training for wilderness rescue and self care. The schools affiliated with Tilton's program include the Wilderness Medicine Institute, a subsidiary of NOLS, and SOLO.
