Create responsive and intelligent game AI using Blueprints in Unreal Engine 4 About This Book Understand and apply your Game AI better through various projects such as adding randomness and probability, and introducing movement Configure and debug Game AI logic using multiple methodologies Bridge the gap between your knowledge and Game AI in Unreal Engine 4 Who This Book Is For This book is for programmers and artists who want to expand their knowledge of Game AI in relation to Unreal Engine 4. You are recommended to have some experience of exploring Unreal Engine 4 prior to this book because we jump straight into Game AI. What You Will Learn Understand the fundamental components of Game AI within Unreal Engine 4 Skillfully introduce Game AI within Unreal Engine 4 Configure, customize, and assign Navigation and AI components to your pawn Create, debug, and analyze Game AI behavior Design responsive Game AI using the Behavior Tree methodology Create smart objects designed to interact with AI Utilize advanced AI features within your project to maximize the user experience In Detail Unreal Engine is a powerful game development engine that provides rich functionalities to create 2D and 3D games. Developers have the opportunity to build cross-platform mobile and desktop games from scratch. This book will show you how to apply artificial intelligence (AI) techniques to your Unreal project using blueprints as your scripting language. You will start with an introduction to AI, and learn how it is applied to gaming. Then you'll jump right in and create a simple AI bot and apply basic behaviors to allow it to move randomly. As you progress, you'll find out how to implement randomness and probability traits. Using NavMesh, you will impart navigation components such as character movement, MoveTo nodes, settings, and world objects, and implement Behavior Trees. At the end of the book, you will troubleshoot any issues that might crop up while building the game. Style and approach This easy-to-follow project-based guide throws you directly into the excitement of Game AI in an approachable and comprehensive manner.

These digital bookmarks are a portable and fun way to monitor and record daily reading. It has a programmable countdown timer with an alarm and a cumulative timer for multi-session reading.

Bring life to your robot using ROS robotic applications About This Book This book will help you boost your knowledge of ROS and give you advanced practical experience you can apply to your ROS robot platforms This is the only book that offers you step-by-step instructions to solidify your ROS understanding and gain experience using ROS tools From eminent authors, this book offers you a plethora of fun-filled examples to make your own quadcopter, turtlebot, and two-armed robots Who This Book Is For If you are a robotics developer, whether a hobbyist, researchers or professional, and are interested in learning about ROS through a hands-on approach, then this book is for you. You are encouraged to have a working knowledge of GNU/Linux systems and Python. What You Will Learn Get to know the fundamentals of ROS and apply its concepts to real robot examples Control a mobile robot to navigate autonomously in an environment Model your robot designs using URDF and Xacro, and operate them in a ROS Gazebo simulation Control a 7 degree-of-freedom robot arm for visual servoing Fly a quadcopter to autonomous waypoints Gain working knowledge of ROS tools such as Gazebo, rviz, rqt, and Move-It Control robots with mobile devices and controller boards In Detail The visionaries who created ROS developed a framework for robotics centered on the commonality of robotic systems and exploited this commonality in ROS to expedite the development of future robotic systems. From the fundamental concepts to advanced practical experience, this book will provide you with an incremental knowledge of the

ROS framework, the backbone of the robotics evolution. ROS standardizes many layers of robotics functionality from low-level device drivers to process control to message passing to software package management. This book provides step-by-step examples of mobile, armed, and flying robots, describing the ROS implementation as the basic model for other robots of these types. By controlling these robots, whether in simulation or in reality, you will use ROS to drive, move, and fly robots using ROS control. Style and approach This is an easy-to-follow guide with hands-on examples of ROS robots, both real and in simulation.

In 1996 Barghouti went back to his Palestinian home for the first time since his exile following the Six-Day War in 1967, first in Egypt and then in Hungary, and wrote a poignant and incisive account of the exile's lot in the acclaimed memoir *I Saw Ramallah*. In 2003 he returned to Ramallah to introduce his Cairo-born son, Tamim Barghouti, to his Palestinian family. Ironically, within a year Tamim himself had been arrested for taking part in a demonstration against the impending Iraq War and found himself not only in the same Cairo prison from which his father had been expelled from Egypt when Tamim was a baby, but in the very same cell. *I Was Born There, I was Born Here* traces Barghouti's own life in recent years and in the past - early life in Palestine, expulsion from Cairo, exile to Budapest, marriage to one of Egypt's leading writers and critics (Radwa Ashour), the birth of his son, Tamim, and then the young man's own expulsion from Cairo. Ranging freely back and forth in time, Barghouti weaves into his account poignant evocations of Palestinian history and daily life. His evocative, composed prose, beautifully rendered in Humphrey Davies' precise and sensitive translation, leads to the surprisingly candid condemnation of the Palestinian authority's leading figures and the astonishing verdict that 'The real disaster that the Palestinians are living through these days is that they've fallen under the control of a bunch of school kids with no teacher.' Beautifully rendered by the prize-winning translator Humphrey Davies, *I Was Born There, I Was Born Here*, is destined, like its predecessor, to become a classic.

From a legendary writer both beloved and banished by Iraq -- a fine work of Arabic literature in the vein of Naguib Mahfouz and Elias Khoury, and a magical and moving comic novel about the birth of modern Iraq. Kirkuk, Iraq, the 1950s. The day Hameed Nylon loses his job, and gains an unfortunate nickname, is the day that his life begins: dismissed as a chauffeur when rumors surface that he propositioned his British boss's posh-tart wife, Hameed finds his true calling as a revolutionary in an Iraq that is destined for a sea change. Also bent on bucking the system is Hameed's brother-in-law, the money-scheming butcher Khidir Musa, who runs off suddenly to Russia to find two brothers who have been missing since World War I. And the key to their fate is held by a seven-year-old boy, Burhan Abdallah, who stumbles upon an old chest in his attic that allows him to speak with three white-robed old men, beings who inform him that they are, in fact, angels.

This collective work identifies the latest developments in the field of the automatic processing and analysis of digital color images. For researchers and students, it represents a critical state of the art on the scientific issues raised by the various steps constituting the chain of color image processing. It covers a wide range of topics related to computational color imaging, including color filtering and segmentation, color texture characterization, color invariant for object recognition, color and motion analysis, as well as color image and video indexing and retrieval. Contents 1. Color Representation and Processing in Polar Color Spaces, Jesús Angulo, Sébastien Lefèvre and Olivier Lezoray. 2. Adaptive Median Color Filtering, Frédérique Robert-Inacio and Eric Dinet. 3. Anisotropic Diffusion PDEs for Regularization of

MultichannelImages: Formalisms and Applications, David Tschumperlé. 4. Linear Prediction in Spaces with Separate Achromatic and Chromatic Information, Olivier Alata, Imtnan Qazi, Jean-Christophe Burie and Christine Fernandez-Maloigne. 5. Region Segmentation, Alain Clément, Laurent Busin, Olivier Lezoray and Ludovic Macaire. 6. Color Texture Attributes, Nicolas Vandembroucke, Olivier Alata, Christèle Lecomte, Alice Porebski and Imtnan Qazi. 7. Photometric Color Invariants for Object Recognition, Damien Muselet. 8. Color Key Point Detectors and Local Color Descriptors, Damien Muselet and Xiaohu Song. 9. Motion Estimation in Color Image Sequences, Bertrand Augereau and Jenny Benois-Pineau.
