Creating Html 5 Websites And

If you start with a wireframe for your website, you can think of the wireframe like using blueprints to build a house. You can build on that metaphor, when you use HTML5 to create a Framework for a web page in much the way you frame a house with two-by-fours. In a valid HTML5 web page, the only required tags are the doctype, title, and a block element, such as the paragraph tag with

How to Create a Website with HTML5 - dummies

To create a new page, click on the appropriate button, give a name to the page, and click on the Create Page button. After that, a Presets Manager will open. You can choose the content blocks you want to stuff a new page with. If you scroll down, you will see the collection of different elements such as the Call to Action 6 button:

How to Create Your First Site with HTML5: Step-by-Step Guide

Since the World Wide Web emerged in the early 1990s, HTML has evolved to become a relatively powerful markup language, which, when backed up by its close partners JavaScript and CSS, can be used to create visually stunning and interactive Web sites and applications. This tutorial serves as a hands-on introduction to HTML5 and CSS3. It provides information about the

Each of the sectioning elements in
HTML5 should almost in any case
contain a heading. By giving each
section a specific heading you are
creating a new section in the HTML5
outline. This is important as a proper
outline does not only improve
accessibility but is also good for SEO. To
create a correct HTML5 outline you can
use the Outliner Tool. In case you see an
“Untitled Section” which corresponds to
a section element in your HTML code
