Figure 3 (C) illustrates different methods for estimating bulk eddy viscosity in the UBL. The distribution labeled K sim is from the similarity model used to construct the stress profile of Figure 1(B) by matching observed stress at 4 m. The vertical distribution labeled K local is the product  $\lambda_{peak} u^*$  at each level (Figure 3A and B).

Lift is created by deflecting a moving fluid (liquid or gas), and drag is generated on a body in a wide variety of ways. From Newton's second law of motion, the aerodynamic forces on the body (lift and drag) are directly related to the change in momentum of the fluid with time. The fluid momentum is equal to the mass times the velocity of the
