The first farmers were two groups, not one The ancient cultures moved apart to take farming east and west A bone fragment from a 7,000-year-old farmer was discovered in this cave in Iran. His DNA, and the DNA of three other individuals from a second Iranian site, revealed that there were two different groups of early farmers.

The first farmers were two groups, not one | Science News ...

Around 12,000 years ago, hunter-gatherersmade an incredible discovery. They dug up the ground, scattered a few wild grains, and learned how to farm. Farming meant that early humans could control their sources of food by growing plants and raising animals.

Early Farming | First Farmers For Kids | DK Find Out

Farming meant that early humans could control their sources of food by growing plants and raising animals. They did not have to move in search of food and eventually began to settle in one place all year round. Around 5000 BCE, the plough was invented, which made it easier to sow seeds in the ground.

The first engine-powered farm tractors used steam and were introduced in 1868. These engines were built as small road locomotives and were handled by one operator if the engine weighed less than five tons. They were used for general road haulage and, in particular, by the timber trade. The most popular steam tractor was the Garrett 4CD.
