Biomagnification Through A Food Chain Lab 4 Answers Essay

Food Chains: The energy stored by producers can be passed through an ecosystem along a food chain, a series of steps in which organisms transfer energy by eating and being eaten. Food Webs: In most ecosystems, feeding relationships are more complex than can be shown in a food chain.

Lab: Food Chains and Food Webs - Frontier Central School ...

Lab: Food Chains and Energy in Ecosystems All organisms need an input of energy and nutrients to live. For animals, which are heterotrophs, this come from the food they eat. For plants, which are autotrophs, the source of energy is the sun — they produce their own food through photosynthesis — and their source of nutrients is the soil.

Lab 4: Biomagnification through a food chain Flashcards ...

If all the food chains were connected, the result is a food web. A food web is a group of connected (overlapping) food chains. A food web shows many energy (food) relationships. Objectives: In this lab you will: A. determine what different animals eat in several food chains. B. understand that energy is passed along the whole food chain, not from just one trophic level to the next. .
