The Site Formation Processes in Archaeology

Formation processes are the events that affect how sites of human activity came to be buried and what happened to them afterwards. Each site has evidence of use and abandonment. Once the site ceases to have human activity present, it becomes subject to a myriad of events that dictate its potential survival and future in the archaeological record. Examples can include: later human activity, weathering, and plant and animal interaction.

Archaeological Formation Processes - digitlwithraven

Formation processes embodies a vision that the cultural past is knowable, but only when the nature of the evidence is thoroughly understood. It shows how one can make the past accessible in practice by identifying the variability introduced by the diverse processes of people and nature that form the archaeological record.
