Lecture Notes Infectious Diseases

This core text provides an excellent concise introduction to infectious diseases. The book integrates basic science with clinical practice with disease-orientated descriptions and clinical presentations on a system-by-system basis. It is therefore ideal for both the student and the practitioner. For this new sixth edition the text has been brought fully up to date throughout.

Lecture Notes: Infectious Diseases, 6th Edition | Wiley

chronic diseases: non infectious, usually long lasting; eg cancer, heart disease, diabetes, etc.

infectious diseases: caused by some pathogen (virus, bacteria, fungus, etc) eg. malaria, TB, HIV, pneumonia, etc. bacteria and viruses cause the majority of human infectious diseases (and some protists and fungi)

(PDF) Lecture Notes on Infectious Diseases

Lecture Notes. An infectious disease is a clinical illness that results from the presence of a pathogen; the most common pathogens involved in cat and dog infectious disease are viruses and bacteria. Transmission of an infectious disease often occurs because the pathogen is shed in the animal's bodily fluids and can therefore affect other animals either directly...through animal to animal contact...or indirectly, through contact with contaminated bedding, bowls, people, etc....anything that ...

causes of death were due to infectious diseases.

UNIT 1 Introduction to Infectious Diseases

- These infectious agents share many similarities with bacteria, but lack certain structures (e.g., cell wall) or metabolic capacity (e.g., ATP synthesis)
- Chlamydiae and rickettsiae are obligate intracellular parasites that replicate in phagosomes of epithelial cells or cytoplasm of endothelial cells
- Rickettsiae are transmitted by arthropods and classically cause a hemorrhagic vasculitis
- Mycoplasma spread in respiratory aerosols and cause pneumonia Please see <http://www.who.int/en/>
