Fitness testing normative data (norms) can be found associated with many fitness tests. Norms are very useful to help guide you in the interpretation of the test results, but it is important for you to understand what they are and the possible limitations of using them.

Fitness Testing Norms - Topend Sports

Aerobic fitness: Target heart rate zone The target heart rate zone is an increase in your heart rate — 50% to 85% of the maximum heart rate for your age — great enough to give your heart and lungs a good workout. Aim for 50% to 70% when you do moderately intense activities and 70% to 85% when you do vigorous activities.

How fit are you? See how you measure up - Mayo Clinic

Fitness norms, such as general population mile times, also can help you figure out where you stand and pick a long-term objective. Just don't aim too high right away. "People look at norms and tables and they want to be excellent, even if they haven't been doing anything," Bryant says.

Best Fitness Benchmarks - IDEA Health & Fitness Association

The Norms for fitness is the perfect resource for testing and measurement of pre and post performance training. I have used many of the tests in the book for my students. I would recommend this to any Performance Specialist, Strength and Conditioning Coach or Personal Trainer.
