Example 3: Find the volume and surface area of the figure below 8 5 3 in Solution: This is a sphere. We are given that the diameter of the sphere is 8 5 3 inches. We need to calculate the radius of the sphere to calculate the volume and surface area. The radius of a sphere is half of its diameter.

mass per volume.

These are just two simple types of calculations that involve these formulas. This is a short list of common geometric shapes and their surface area formulas and volume formulas.

Page 6 of 57 the process of calculating the area, we multiplied units times units. This will produce a final reading of square units (or units squared). Thus the area of the figure is 112 square units. This fits well with the definition of area which is the number of square units that will cover a closed figure.

Pressure is force divided by area, so pressure is equal to  $p = \frac{F}{A}$ . The force  $F$  is equal to  $\frac{1}{3} N$ , and the area  $A$  is equal to volume  $V$ , so this can be rewritten as:  $p = \frac{1}{3} \frac{N}{V}$  and rearranged to give:  $pV = \frac{1}{3} N$ . This equation is for a single particle; multiply by  $\frac{1}{3} N$  to find the pressure exerted by all of the particles on one wall. This gives the final equation:  $pV = \frac{1}{3} N mc^2$
