Selecting a BMS with a standardised design built on previous experience, ensures that all of the complex programming work needed to communicate with power, cooling, and IT systems has already been done and that it is already pre-configured to interact with 3rd party systems making implementation much simpler.

How to choose a building management system - ACR Journal

Selecting a Building Management System (BMS) for Sites with a Data Center or IT Room. A data center or IT room uniquely alters the requirements of a building management system (BMS). This is primarily because of the criticality of IT and its dependence on facility infrastructure. IT's reliance on power and cooling systems makes a BMS an important part of a larger data center infrastructure management (DCIM) solution that brings together Facilities and IT.
